

Rail System

Use our rail system to provide storage to one or more walls in your garage via our simple Rail System.

Why choose our Rail System?

Our simple to install Rail System is an ideal option if you are looking for a cost effective storage solution in your garage.

Each rail is fixed to the wall and then storage accessories are clipped on. Very easy to install and looks good.

Add in hooks, shelving, baskets and more to create your ideal garage space.

This specialised system was founded by Kenovo DuraTrax in China back in 2010 and we are proud to be their South African Partner

Rail Options

Our rails come in three different lengths so one can always be found to fit your space.

Short - length 820mm

Medium - length 1220mm

Long - length 1820mm

How are they installed?

- Once the location is chosen, a drill is used to create holes in the wall and then rawplugs are added
- The rail base is secured in place with screws and the rail cover is snapped into place

There are also rail end stoppers available so hooks can not easily come off of the rail as well as adaptors for adding rails to our shelving units.

Rail End Stopper

Rail Adaptor

Or for single items being stored, try a Mounting Block

A mounting block is a useful addition if you are only looking to store one item away from the main storage area.

Each block allows you to attach a hook to, thereby allowing you to store one single item.

They come in three sizes - small, medium and large - and can let you know the most appropriate size for your desired storage hook.

Screws and fasteners are added to the mounting blocks to keep them secure and then the hook simply clips on.

Next steps

Once you decide to go ahead with your installation the date is confirmed, usually within two weeks but it may be up to 5-6 weeks during busy periods.

What happens during installation?

We will ask you to empty the garage before our arrival and then our installation team will get to work. A standard double garage will take approximately 1-2 days

Benefits

So what exactly are the benefits of having this system installed?

- Our DuraTrax Rail System is a great way to add in storage to your garage. Just install the rail on the wall and then decide which storage accessories you want to add
- Build it up over time and as your needs change
- It only covers part of the wall, an ideal solution if your walls are clean and neat
- Easy to install and then remove if you decide to move home
- Optimises the space you have and ensures you use every inch of available space

What is the installation process?

Depending on where you live, we can either send someone over to visit your garage or we can quote remotely.

We come to see you

One of our team will visit you to take a look at your garage. They will take photos and note dimensions. They will also speak with you about exactly what your needs are so they can go away and prepare drawings and a quote ideal for your bespoke space. We will then email you through the quote.

Remote quote

If you live a little further away, you can send in photos and dimensions of your garage plus a little information on what you are looking for. We can then prepare the drawings and quote for you remotely and send it to you via email.

Choosing accessories

Part of the process is working out what kind of storage accessories you will need.

We offer a huge variety of options which include shelves, baskets, bike hooks, surf board storage, hook packs, ladder hooks, workbenches, garden storage, kayak storage, golf racks, tip out bins, tool racks and shoe shelves,

Choose these as part of your initial installation or give us a call to purchase after work is completed.

More detail on accessories can be found on the next page.
